

Architectural Acoustics

A poorly designed acoustic environment can lead to fatigue, loss of concentration and boredom on behalf of its occupants. Noise is also an important part of external and/or industry-standard design targets such as the BREEAM assessment. Be it an office or classroom, through to a lecture

theatre or studio, the acoustic conditions must be carefully controlled and are most effectively tackled at the design stage. From computer modelling and prediction to state-of-the-art acoustic measurements, PDA can offer a full service to all parts of the design and build stages of any project. Speech privacy is a key concern, with the
